

# WHAT ARE SYNTHETIC CANNABINOIDS?

Synthetic Cannabinoids are man-made chemicals with similar effects to THC (delta-9 tetrahydrocannabinol), the active, mind-altering chemical found in marijuana plants (cannabis).

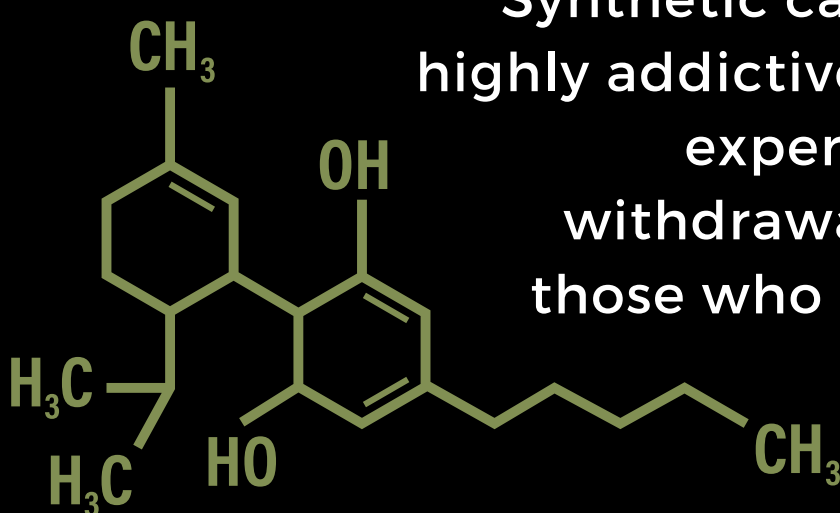

## SYNTHETIC CANNABINOIDS ARE MARKETED UNDER THE FOLLOWING "STREET" NAMES:

- Spice
- Kronic
- Northern Lights
- K2
- Kaos
- Aphrodisac tea
- Herbal incense
- Potpourri

## THE DANGERS OF SYNTHETIC CANNABINOIDS:

Synthetic cannabinoids are highly addictive and users can experience the same withdrawal symptoms as those who are addicted to marijuana.

Around 80% of synthetic cannabinoid users also use cannabis.

The psychoactive effects can pose long-term dangers to the mental and physical health of users, such as:

- Extreme anxiety
- Confusion
- Paranoia
- Hallucinations
